Zoner Studio Fall Update: Take Your Edits Further

A new Advanced Preset Workflow makes sophisticated photo editing easier and gives photographers more freedom to create their own style. The update also brings more precise color adjustments and a new AI Lab.

Brno, Czech Republic – Zoner Studio introduces its Fall Update, led by a new Advanced Preset Workflow. Photographers can now build their edits step by step, **achieving polished results with less effort**. The update also adds **better color controls and experimental Zoner AI tools**.

Advanced Preset Workflow

The highlight of the update is **37 new presets across six categories** designed for flexible, step-by-step editing. Instead of applying a single finished look, photographers can build their own style. They can start with a **Color Style**, add **Film Glow** or **Microcontrast**, apply **Corrections** or **Creative Effects,** and fine-tune the final result.

Advanced techniques become easier to use, without having to master every tool.

More Precise Color and Tonal Control

The update also gives photographers more control over fine adjustments.

The improved **Luminance Range** masking tool makes it easier to target highlights and shadows naturally. Expanded **Saturation Correction** offers greater control over how **Tone Curve** adjustments affect color saturation. And **Split Toning** now allows photographers to adjust midtones independently, alongside highlights and shadows.

AI Lab: A Space to Explore Creative AI

The new **AI Lab** brings selected creative and generative tools from **Zoner AI** directly into Zoner Studio.

Photographers can experiment with features such as **Noise Removal** , **Remove Object**, **Generative Extend**, and **Generative Rotate** . AI Lab opens up creative possibilities beyond conventional photo editing.

> ***"AI is opening up a world of new possibilities for photographers. Our priority is to develop tools that genuinely make sense when working with real photographs. That's why we fully integrate AI features into Zoner Studio only when we're confident in their quality and practical value. At the same time, we don't want to hold back photographers who enjoy trying new things. That's exactly why we created AI Lab – a place to experiment with Zoner AI tools. It will be a living, evolving space where new features can appear, while others may change or be removed over time. And the tools that prove their value may eventually become part of Zoner Studio itself,"*** *says Michal Prouza, Head of the Software Division at ZONER.*

Other Improvements

The Fall Update also includes smaller workflow improvements, such as **filtering by stacks in Search**. The **Zoni AI Assistant** is now available directly inside Zoner Studio, helping photographers find answers about the software and its features without leaving their editing workspace.

Availability

The Fall Update is available to all Zoner Studio subscribers at no additional cost. New users can explore the latest features with a **free 7-day trial**.
